

Consumption transparency and energy savings in multi-unit buildings

10. September 2018 • Berlin • Hans Martin Hermann

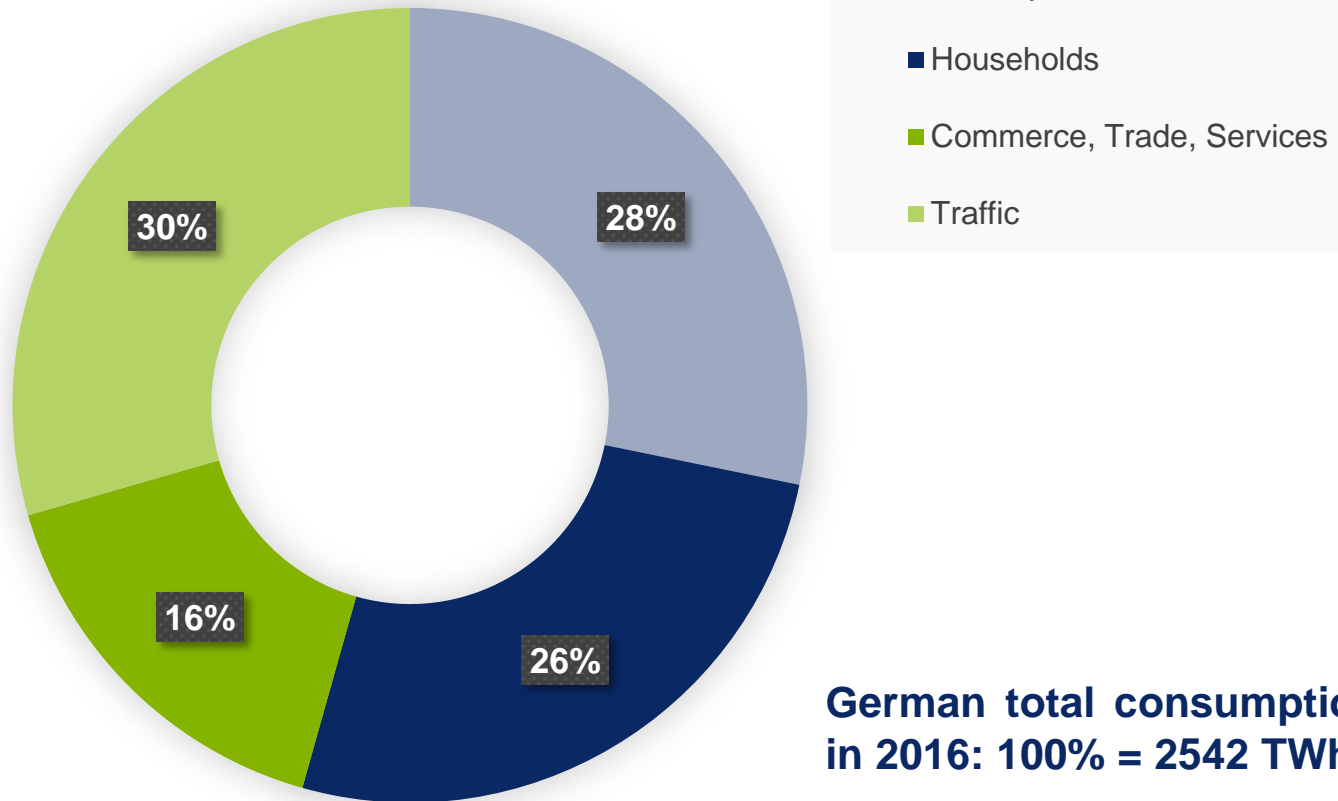

ista provides transparency

- ista is one of the leading companies in improving energy efficiency in the building sector. With our products and services, we help to sustainably save energy, CO₂ and costs. ista has specialised in submetering, in other words the individual metering, billing and transparent visualisation of consumption data for multi-family buildings and commercial properties

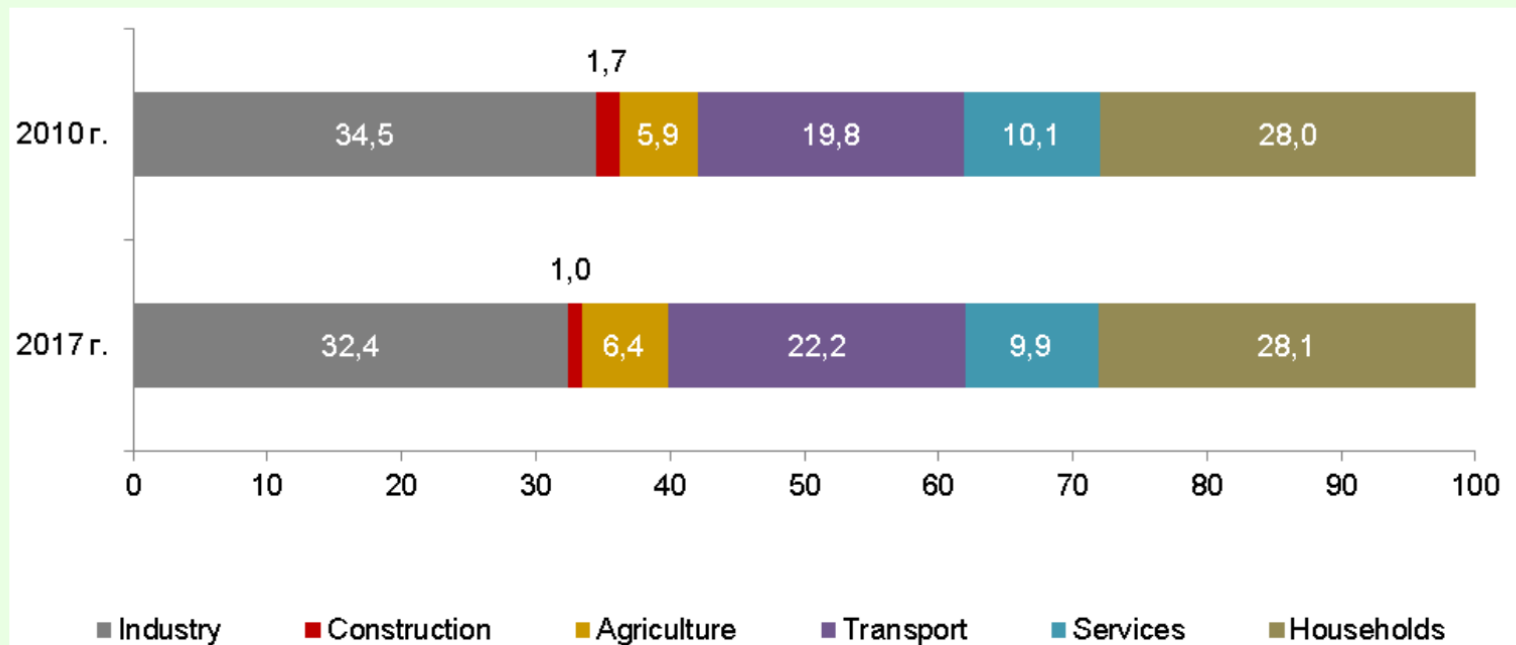

Energy Consumption (DE)

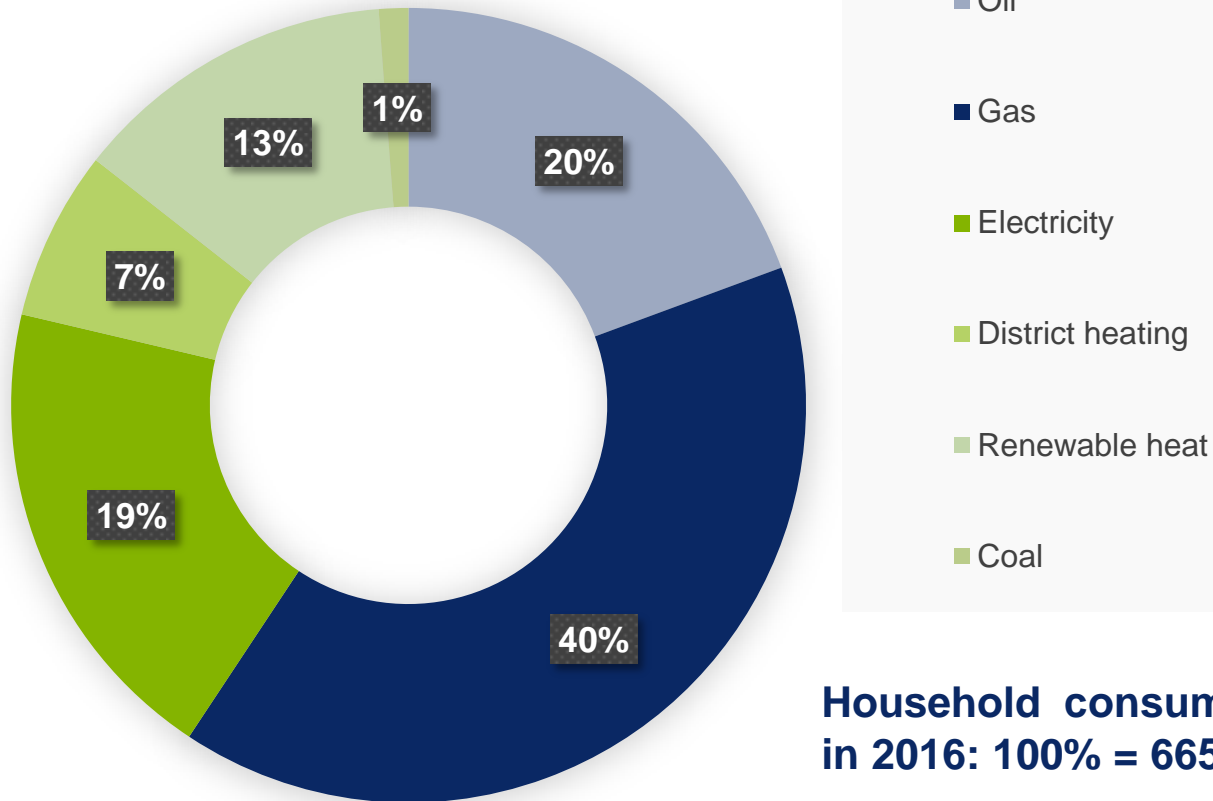

Energy Consumption (BY)

Final energy consumption by sector in 2010 and 2017

(as percentage of total)

Energy Consumption in Households (DE)

Households consumption in detail

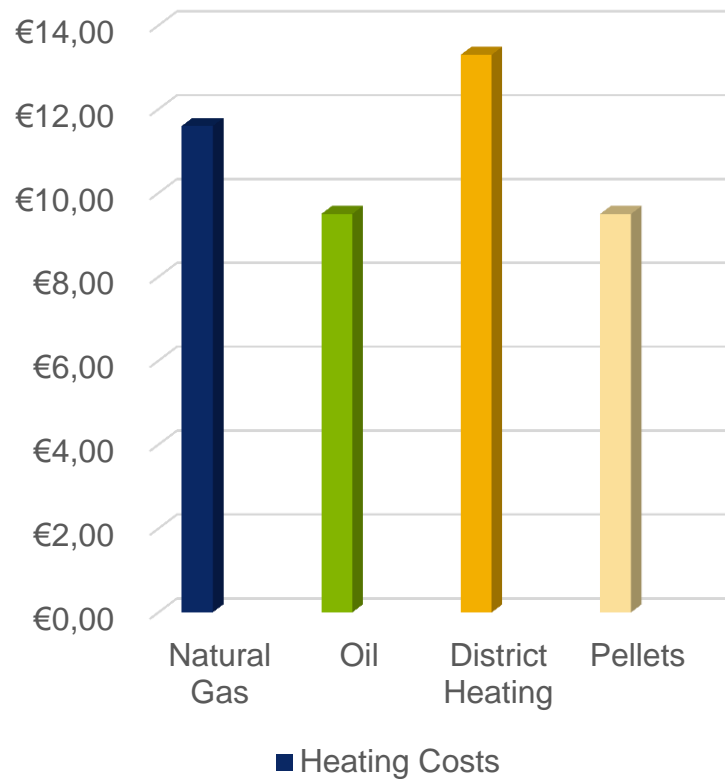

Submetering:

- Around 85% of energy consumed in households is used to generate heat and warm water.¹
- Submetering covers 72% of the total energy consumption in households
- Through Submetering a tenant saves approximately 15% – 25% on energy requirements for heat.

¹ UK Department for Business, Innovation and Skills

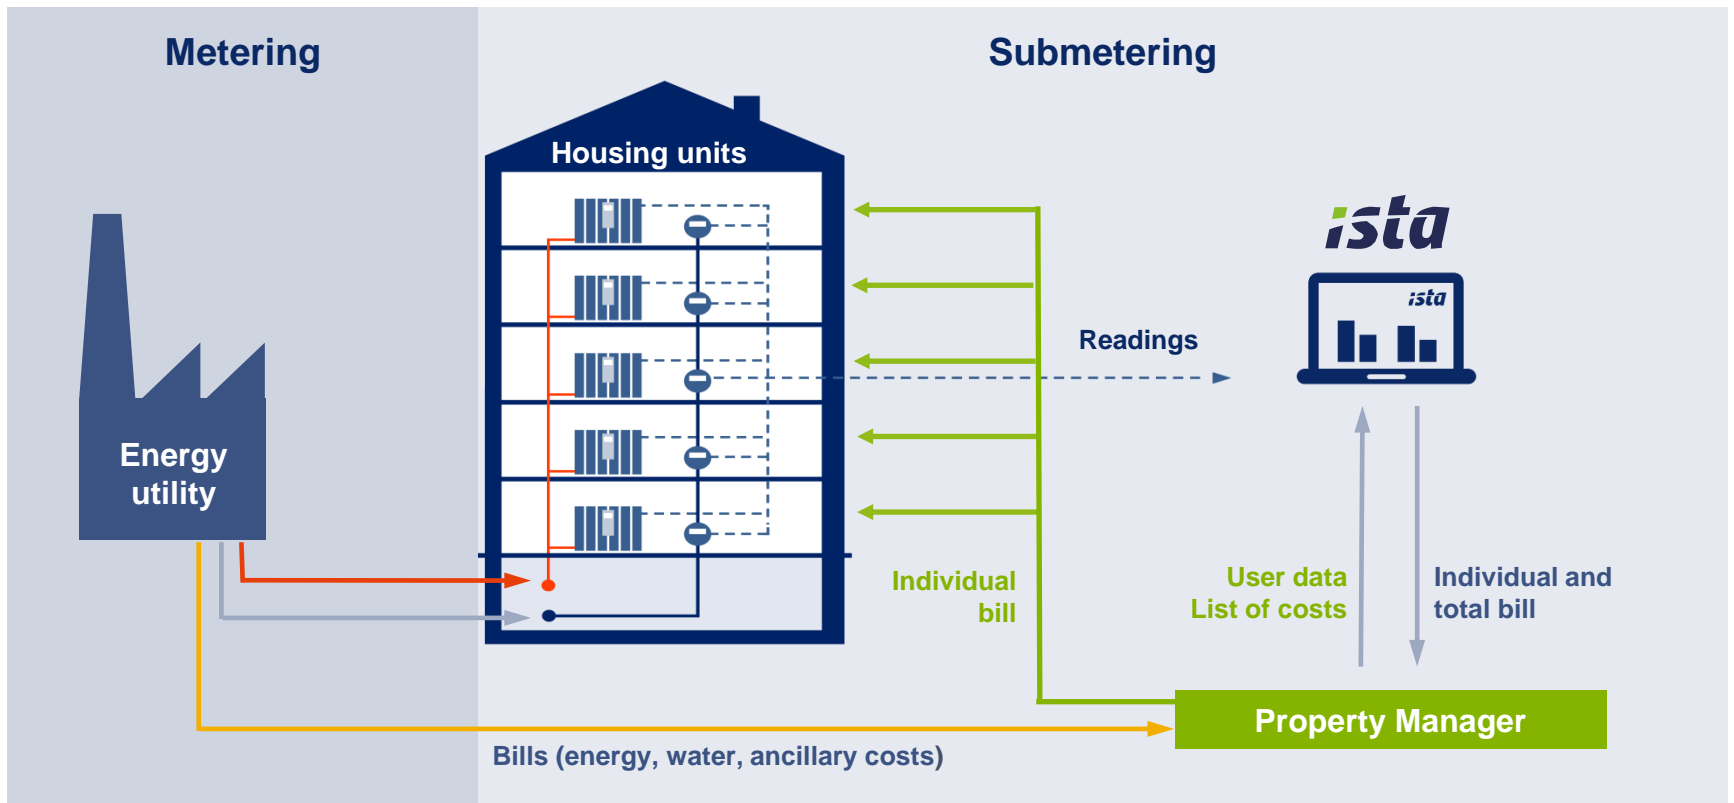

Heating costs (DE)

Average heating costs per
m² p.a.

- On average in Germany the heating costs for a 70m² flat is between 550 and 1200€.
- The large discrepancy is mainly related to the building efficiency standard.

Definition of Metering and Submetering

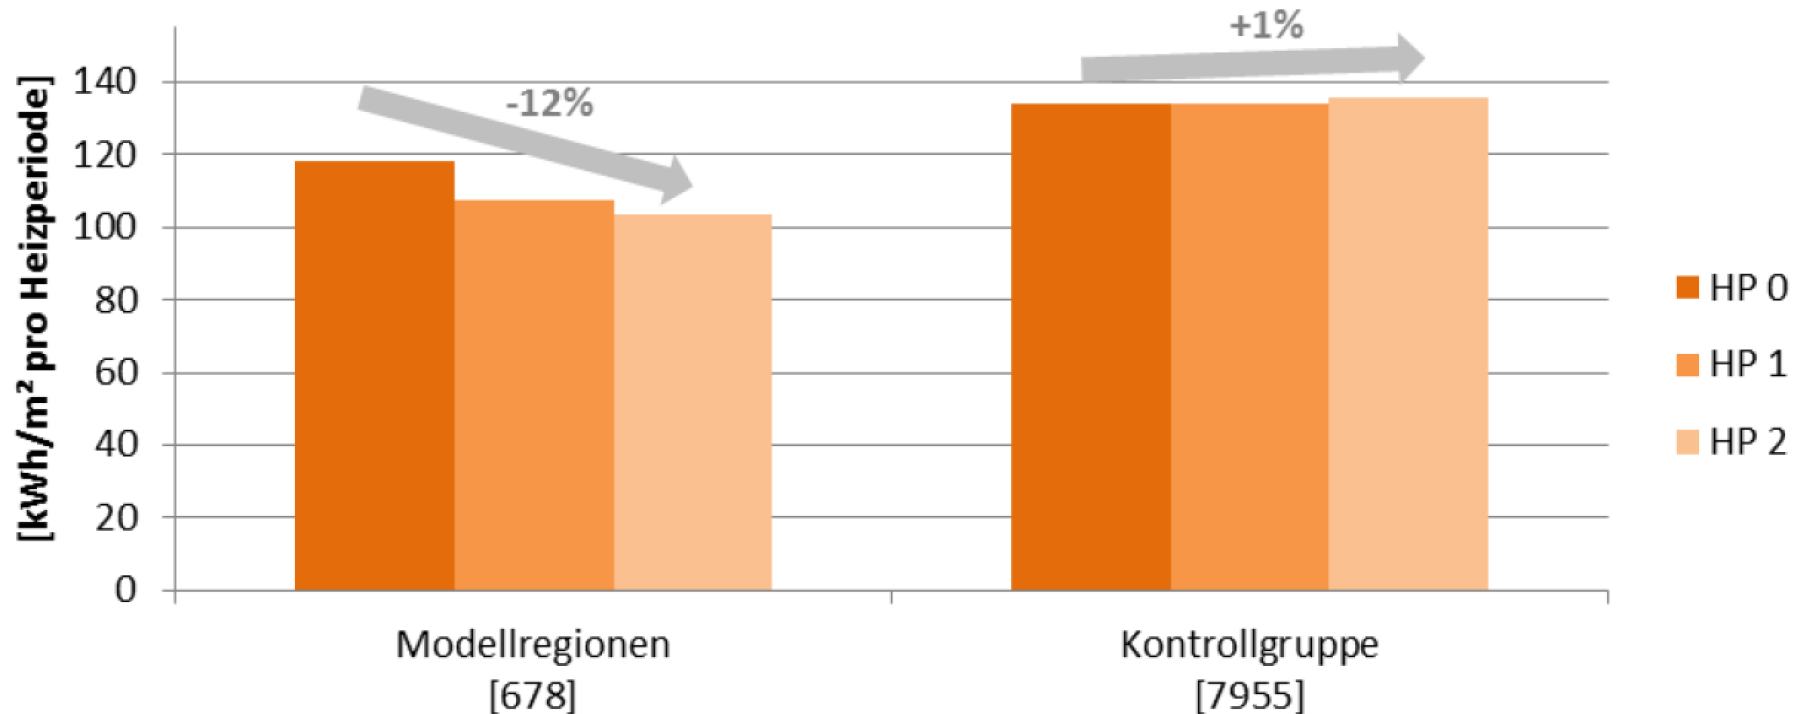

Submetering – a proven concept

Numerous Studies show the energy saving potential of submetering!

Sub-Annual consumption information

Heizungsverbrauch (klimabereinigt) der Mieterhaushalte in den Modellregionen im Vergleich zu Mieterhaushalten in Kontrollgruppe

The Sub-Annual information can further induce savings – but it depends on the household-structure and the building-efficiency!

All stakeholders profit from this

Tenants

Tenants have transparency of their consumption.

They therefore save energy, CO₂ and costs (proven to be 15% to 25%).

Owners

Owners are saved the trouble of metering and billing energy consumption.

The attraction of the property increases due to greater energy efficiency.

Commercial properties

Tenants of commercial properties receive transparent documentation on their consumption.

Billing is based on a metering concept specially tailored to commercial properties.

Society and environment

In Germany alone, every year 4.5 million tonnes of CO₂ emissions are avoided through submetering.

1.5 million tonnes alone by ista's customers.

Submetering can be the key to the digital smart building

Hardware

Heat

Water

Smoke alarms

Global infrastructure

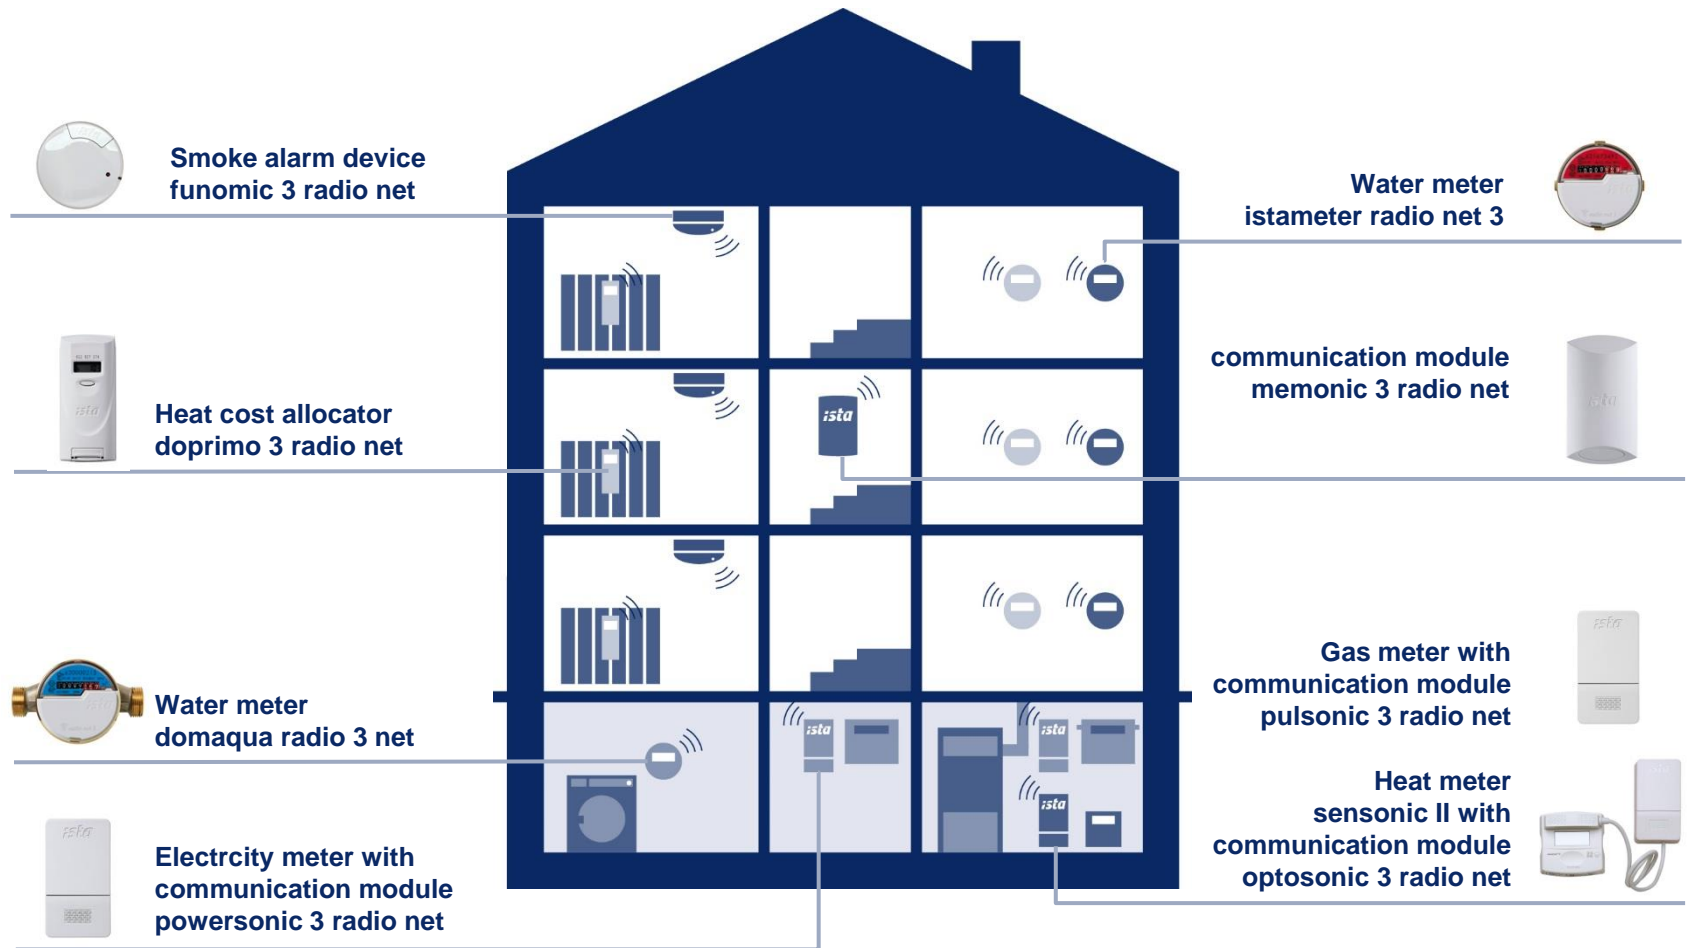

Services

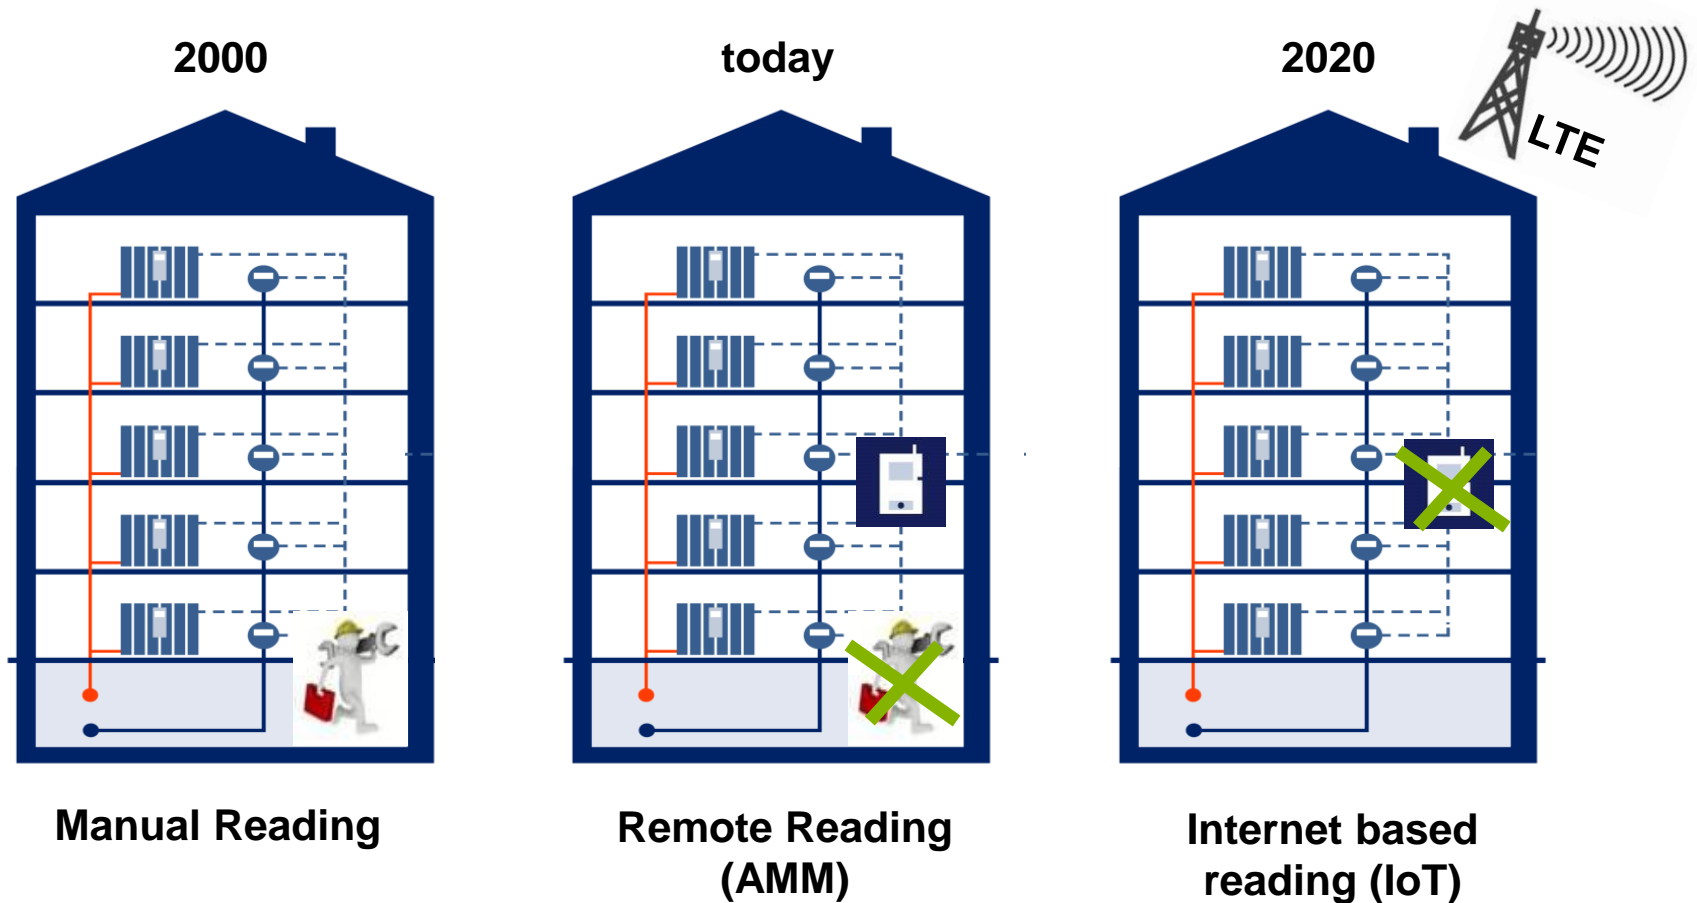

As a partner of the housing industry, we optimise the technical infrastructure in buildings and establish trendsetting business models and services.

Radio system symphonic sensor net

Efficiency and Innovation in Submetering infrastructure

ista cooperates with startups offering future services for smart buildings and cities

Smart Building System

Building Connected Homes for intelligent communication between tenant and landlord

Weather optimized heating

Intelligent boiler control systems in multi-family buildings, based on weather forecasts and consumption profiles

Pay for use

Prepaid-solution for heat supply

Energy Data Management

Online visualization of Water and heat consumption

Boiler check

Efficiency analysis with online results for heating system

istaDES

Housing industry's independent partner and service provider for Heating system management

In Germany alone there are estimated 400 startups focused on improving the living and management of buildings incl. mobility. ista positions itself today as technology transfer partner between real estate industry, utilities and tech companies.

Our infrastructure is the basis for further fields of business and services

Energy management in buildings

Protection of people and property
